

Introducing PASS Release 5.22

PASS Release 5.22 further enriches PASS functionality and improves the procurement process.

Here are the highlights:

PASS oAPT

- A unique identifier was created to distinguish each oAPT. For example, oAPT #1, oAPT #2.
- The oAPT form now contains a drop down field to select a Commodity Group instead of a Commodity Code.

Requisition

- The oAPT drop down is a new field added to the requisition.
- Requisitions will now include the question, “Will You Consider Surplus Property?” with a Y/N Pull Down.

Reports

- The new oAPT identifier field was added to the oAPT report.
- A new standard report was created for oPIFs.

Sourcing

- The issue of slow display of the listing of commodity codes in e-Sourcing is now fixed. The commodity data now displays immediately when the commodity code is selected.
