

Introducing PASS Release 3.12

The PASS Release 3.12, implemented on August 20, 2009 will further enrich PASS functionalities and improve the procurement process. Here are the highlights:

Enhancement:

PO Modifications

When canceling a PO, the original commodity Contracting Officer will be required to approve the cancellation, not the Agency Contracting Officer.

Drop-Downs

All PASS drop-downs will hold up to 10 recently used items for quick access rather than 5.

Timesheet Purchase Orders Report

A Project Manager filter was added to the Timesheet Purchase Orders report allowing data to be retrieved based on the Project Manager. Old timesheets are now updated to reflect the same data.

New Feature in PASS:

Delay Purchase Until

The requisition title page has a new field, "***Delay Purchase Until***". This field allows you to select a date to hold a fully approved requisition to be ordered. This feature will be used by OCP to process fiscal year beginning requisition.
