

Introducing PASS Release 5.12

PASS Release 5.12 further enriches PASS functionality and improves the procurement process.

Here are the highlights:

Requisition

The NOGA approval flow has been updated so that the Grant Approver is always the final approver and not in parallel with other approvers.

User Maintenance Request eForm

User Maintenance requests that are submitted to add the Contract Administrator role now require approval from the PASS Training Approver.

Analysis

The "creation date" field has been added to the Contract Workspace in Analysis.

Sourcing

"Best and Final Offers" from vendors can now be captured after the sourcing event has closed without reopening the event for all vendors.

The commodity codes listing for vendor registration now displays all codes, master and detailed codes.
