

Introducing PASS Release 5.8

PASS Release 5.8 further enriches PASS functionality and improves the procurement process.

Here are the highlights:

Standard Reports

PASS 5.8 introduces a report that allows users to run a Requisition report by accounting attributes. The user can select any of the following grants, indexes, PCA, and projects. Like the PO accounting reports, the user must take care to only select the indexes/PCAs that belong to the agency. If necessary, select more accounting attributes than fewer. Search by submitted date will return all requisition data for a specific period.

Sourcing and Contracts Module

The Event Summary report in Sourcing now returns the current status of events.

On the OCP website, the feed for Electronic Opportunities now updates properly when the end time from Sourcing is updated.

The Requisition link from Sourcing and Contracts now works properly. Once clicked, it will pull up the appropriate requisition in Buyer.
